Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

2. Claims 19-22 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending

Application No. 10/611,660. Although the conflicting claims are not identical, they are not patentably distinct from each other because,

Regarding claim 19, see lines 1-14 (see claim 1 of the copending Application No. 10/611,660, lines 1-17).

For claim 19, Applicant merely broadens the scope of copending Application No. US 10/611,660 by eliminating the limitations “ the rogue access point connected to the wired computer network and bridging wireless traffic between at least one rogue client and the wired computer network”.

It has been held that the omission of an element and its function is an obvious expedient if the remaining elements perform the same function as before. In re Karlson, 136 USPQ 184 (CCPA). Also note Ex Parte Raine, 168 USPQ 375 (bd. App. 1969); therefore omission of a reference element whose function is not needed would be obvious to one skilled in the art.

Claim Objections

3. Claim 23 is objected to because of the following informalities: Applicant is request to change the limitation “the network interface” in line 21 to --- the at least network interface --- for consistency of the claim language as the limitation is first mentioned in line 8.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 8, and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites the limitation "the polling step" in line 3. There is insufficient antecedent basis for this limitation in the claim. The same remark applies to claim 21- line 3.

Claim 21 recites the limitation "the edge port" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Allowable subject matter

5. Claims 1-7, 9-20, and 22-29 are allowed.

6. Claims 20, and 21 would be allowable if the base claim overcome the nonstatutory double patenting rejection(s), set forth in this Office action.

7. Claims 8, and 21 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

Art Unit: 2616

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lynn et al. (US 7,058,796) ; Lor et al.(US 2004/0068668); Noel, JR. (US 2004/0023639) are cited to show discovery of rogue access point location in wireless network environments, which is considered pertinent to the claimed invention.
